

Driver Upgrade/Install Information for Imation USB Floppy Drive, Model D353FUE

The Macintosh driver for the Imation Floppy Drive, can be downloaded from the Imation Website. This driver is included on a CD shipped with the USB floppy drive, and is included here as a backup, as needed.

Note: This driver is not needed for most versions of Mac OS. Mac OS 10.x includes native support and the driver should not be installed.

The steps required for installing the driver for the USB floppy drive are as follows:

Please read this entire file before downloading anything to your drive.

1. Download the driver file to the Mac Desktop.
2. Double click on "USBFloppyInstD353FUE" to decompress the file.
3. Double click on "USBFloppyInstD353FUE-1.1," and then click Continue on both the Imation splash screen and the license agreement.
4. Click on Install to add the USB FD Driver. If you need the USB Floppy Enabler, select the Custom Install and follow the menus.
5. Mac will install the driver. Click Finish and restart the computer when prompted.
6. Following the install, you may wish to delete the "USBFloppyInstD353FUE" file from your desktop.
